

THE ALPINE ADVANTAGE ON PULSE CROPS

- ▶ Maximizes available nutrients required for top yields
- ▶ Promotes quick, uniform emergence
- ▶ Seed safe at recommended rates - rhizobium safe
- ▶ Precision Placement
- ▶ Tank mix with fungicides or other post application sprays
- ▶ Optimizes plant health
- ▶ Non-corrosive on planter/drill equipment and tanks
- ▶ Clean, easy handling

GIVE YOUR PULSE CROPS THE ALPINE ADVANTAGE

the starter fertilizer company™

GO WITH THE LEADER ALPINE

- ▶ Highest quality liquid starter and foliar fertilizers
- ▶ Quality, precision placement, seed and foliar safe
- ▶ Low impurities
- ▶ Low salt
- ▶ True solution N-P-K
- ▶ Orthophosphate (available phosphorus)
- ▶ Highly soluble

ALPINE liquid starters and foliars have a neutral pH and is low in both salt index and impurities. These features of our liquid starters enable the product to be placed directly with the seed at planting time. Placement with the pulse seed allows the available phosphorus to be taken up at the critical early stages of growth to maximize yield potential.

Applying available nutrients of ALPINE foliar fertilizer on the plant foliage allows for immediate absorption into the plant in a very short period of time. This immediate uptake promotes better plant health and increased yield potential.

ALPINE liquid starters and foliars contain a high level of orthophosphate. Orthophosphate is immediately available to the plant during the critical early stages of growth. Plants can only take up phosphorus in the orthophosphate form.

GIVE YOUR PULSE CROP THE ALPINE ADVANTAGE

Pulse crops have a critical need for phosphorus and potassium from germination through reproductive stages, where maximum yield potential is determined.

The ALPINE Advantage ensures that the pulse plant has adequate available nutrients when the plant needs it most for maximum yield potential.

Give your pulse plant a strong and uniform emergence with ALPINE seed-placed starter. When used as a foliar fertilizer, and applied to the plant foliage, the nutrients are absorbed quickly throughout the plant. This results in healthier pulse crops which maximizes yield. ALPINE liquid fertilizers can also be tank-mixed with most post-spray applications to save pulse growers time and money!

For maximum yields and early season plant performance, give your pulse crops **The ALPINE Advantage**.

- ▶ Maximizes available nutrients required for top yields
- ▶ Promotes quick, uniform emergence
- ▶ Seed safe at recommended rates - rhizobium safe
- ▶ Precision Placement
- ▶ Tank mix with fungicides or other post application sprays

Sales and Service Advantage

- ▶ Most experienced sales team in the business
- ▶ Direct support at farm level
- ▶ Large dealer network – Over 140 dealers in 200 locations

Equipment Support Advantage

- ▶ 40+ years of equipment experience
- ▶ Inventory of storage tanks
- ▶ Application kits available for all makes and models of planters and drills

Logistics and Delivery Advantage

- ▶ Dedicated fleet of delivery trucks
- ▶ Deliveries from 1,000L to 30,000L
- ▶ Experienced team of delivery drivers
